Simple Portfolio Website Using HTML Only

I made simple portfolio website using HTML only. At the top of the page, I added my name, degree title, and a photo of myself. In the Education section, I shared that I am doing BS Software Engineering and will graduate in 2027.In the Skills section, I listed the technical skills I have learned so far, including HTML, CSS, JavaScript, Graphic Designing, and Git (version control).In the Projects section, I explained that I created this portfolio website to show my skills, education, and projects in a clean and simple way .I used basic HTML tags like <header>, <section>, <ul>, and <img> to organize everything clearly. This is just the beginning of my web development journey, and I will keep updating my portfolio as I learn more.
